Uses Loc Svcs to determine current locale, then determines nearest stored locale, listed alphabetical (default) or by distance from current location subject to Sort By button selection

Selects most recently used property for this location by default. In the event of no stored properties for this location, displays known SOFTWARE DEVELOPER Clients as 'Verified Properties', if no SOFTWARE DEVELOPER clients in this city/town, then draw first five results from Booking.com and display as 'Unverified Properties'.

Selects last known used Room Type for this guest at this property (provided it is available), but includes all available room types for this property in the drop down list. (Drop Down Box, defaults to favourite Room Type). Also includes a 'Cheapest Available' & 'Best Available' (best available is linked to number of guests per room option)

Pulled from the known data downloaded in the basic property information when the property was first added to the app. Updates can be sent to the App at anytime by any property when fields identified as 'basic information' are updated in the master SOFTWARE DEVELOPER installation by the property manager.

Search Results Screen #1

If a property already exists in the local My Properties data store for this [City Name], then that is the only result that is returned, along with a "Find New Properties in [City Name] button.

If no existing property is found in the local My Properties data store, then the query returns a list of all SOFTWARE DEVELOPER properties in that City / Town (within 30kms) under the heading 'Verified Properties in [City Name]".

If no SOFTWARE DEVELOPER properties exist, the query returns top 5 booking.com results under the heading of 'Un-Verified Properties' along with the Note shown in Screen #2 image and buttons linking to booking.com using affiliate id.

Reason for 3 clicks is two fold.

- 1) To intentionally make the 1 click properties more appealing
- 2) Because three steps are actually needed to book a property for the first time

The 3 Steps Are:

- A) Agree to submit your personal guest details to new property
- B) Agree to New Properties Cancellation Policy
- C) Select New Properties Room Type from available Drop Down List and review nightly rates.

Search Results Screen #2

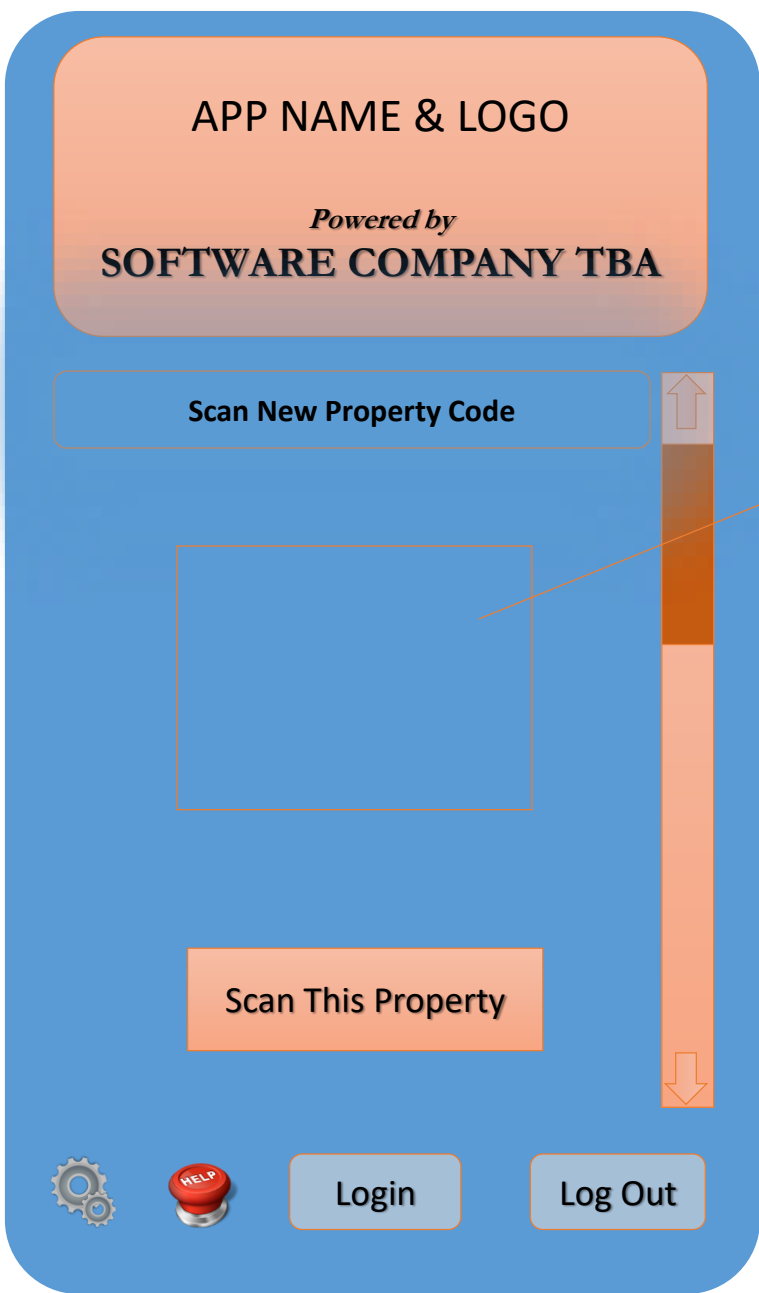

Link behind these buttons contains the SOFTWARE DEVELOPER Booking.com Affiliate ID to earn commissions to help fund this project.

My Booking Confirmations Scr

Also displays any bookings for this guest ID that were made at the property or by phone once saved and sent directly to the guests App – data is only updated subject to background usage permissions as set on the device.
